

# Dog Face Painting Template

1. To start begin by covering the face in a white base as in the picture. Now we are going to paint a spotty dalmation dog face.

Always take care not to get paint in the eyes. As this picture shows an area around the eyes is left unpainted.

This is more important for very small children that may rub their eyes without realising.

2. Next use the black base for around the cheeks and eyes. You need to create the dalmation spots using the black paint.

Painting one big spot over one eye then several smaller spots gives the best look.

Next paint the lips with black paint. Then paint black under the nose and a line joining the nose to the top lip.

Next use a fine brush and the black paint again. This time paint some short thin whiskers around the mouth.

Final to finish create some whisker spots above the top lip. Then some larger whiskers on each cheek, three whiskers on each cheek is usually enough.
